Progress Update – UI/UX Design Project (Geeks Team)

Our team, **Geeks**, is currently working on the **UI/UX design project** for a **mental health platform and app (MindEase)**. The platform aims to provide users with accessible mental health resources, guided self-help tools, and professional support to improve their well-being. Our goal is to create an intuitive and user-friendly experience that encourages engagement and support.

At this stage, we finished the **user research**, where we gathered insights to better understand user needs, behaviors, and pain points.

So far, we have:

• Defined our target audience and key user personas.

• Conducted initial research, including surveys and interviews (if applicable).

• Started analyzing the data to identify common patterns and pain points.

Our next steps are synthesizing our findings into actionable insights and moving on to **wireframing and prototyping**.
